PROFESSIONAL SUMMARY

Full-stack developer and Computer Science undergraduate (Cloud Computing specialization) at RV University with a 7.9+ CGPA, backed by three internships in production and academic environments, including full-stack work on a gamified drone platform (Aerial Adventures/FlyCamp). Skilled across React, JavaScript, Node.js/Express, MySQL, and MongoDB, with hands-on cloud experience building an AWS auto-scaling system that cut infrastructure costs by over 25% using symbolic regression. Combines strong frontend craftsmanship — animated, responsive interfaces built with GSAP and ThreeJS — with backend and API integration skills, plus applied ML experience (CNN-based brain tumor detection at 92% accuracy, audio-based emotion classification). Known for turning concepts into polished, user-centric products end-to-end.

KEY EXPERTISE

full stack development AWS GIT DSA python java c/c++ javascript react Agile docker
Machine Learning Operating Systems computer networks DBMS

EDUCATION

RV University B.Tech. - CSE - Cloud Computing CGPA: 7.96 / 10	2023 - 2027
ADICHUNCHANAGIRI PU COL, BYPASS RD BHADRAVATHI, SHIVAMOGGA DT 577301, Bhadravati 12 th PUE Karnataka Percentage: 92.33 / 100	2023
SWAMY VIVEKANANDA ENGLISH HIGH SCHOOL, Bhadravati 10 th KSEEB Percentage: 89.92 / 100	2021

INTERNSHIPS

Aerial Adventures Pvt Ltd IT / Computers - Software Full stack Engineer Intern	01 Dec, 2025 - Present
Key Skills: Backend Development UI/UX Design React Software Testing Frontend Development JavaScript	
During my time as a Front-End Developing Engineer with Aerial Adventures Pvt Ltd, I focused on building out the user experience and interface for FlyCamp's gamified drone system. My core work involved turning concepts into clean, interactive UI designs and implementing the front-end logic needed to bring those interfaces to life. I also bridged the gap between the front-end and back-end systems to ensure seamless data flow, while actively testing and debugging modules to keep performance smooth and stable. Overall, it was a hands-on role where I was able to take ownership of full-stack feature delivery, test user flows, and contribute directly to the core user experience of the application.	
Zodopt Technology Solutions Pvt. Ltd. IT / Computers - Software Frontend Developer	19 Jun, 2025 - 19 Jul, 2025
Key Skills: Javascript UI/UX ReactJS tailwind css Responsive Web Design	
During my internship at Zodopt Technology Solutions Pvt. Ltd., I worked as part of the front-end development team focusing on building modern, responsive web applications. My primary responsibilities involved developing dynamic user interfaces using React and styling components with Tailwind CSS to ensure clean, responsive layouts across different screen sizes. I collaborated with the team to write clean, maintainable code, translate visual requirements into functional web pages, and optimize overall front-end performance for a smooth user experience.	
RV UNIVERSITY IT / Computers - Software AI for Healthcare	08 Jun, 2024 - 25 Jun, 2024
Key Skills: python Machine learning Google collab training model CNN	
During an on-campus AI for Healthcare internship, I developed a machine learning model designed to analyze audio inputs and accurately identify human emotions, such as sadness, anger, calm, etc. Built the complete audio processing pipeline to extract critical acoustic features—including pitch, tone, and frequency variations—from raw voice recordings. By training and optimizing the model on diverse vocal datasets, achieved an 80% accuracy rate in emotion classification, demonstrating strong potential for healthcare applications like remote mental health screening and patient mood monitoring	

PROJECTS

Smart Auto-Scaling System

01 Jan, 2026 - 25 May, 2026

Mentor: Prof Narmada T | Team Size: 3

Key Skills: AWS (Lambda, CloudWatch, EC2, ASG) Python Symbolic Regression (PySR) MySQL Cloud Infrastructure

Project Link: <https://github.com/yashavanthap55/Smart-Autoscaling-report>

I worked on a smart auto-scaling system for AWS designed to optimize cloud infrastructure costs and prevent performance dips during traffic spikes. Instead of relying on traditional reactive rules, we used Symbolic Regression (PySR) on over a million historical metrics to generate lightweight, explainable scaling formulas. These formulas were deployed in an AWS Lambda function that continuously monitors real-time CloudWatch telemetry, predicts resource needs minutes in advance, and adjusts EC2 capacity via Auto Scaling Groups. To keep things stable, we built in moving averages and cooldown periods to eliminate thrashing. In testing, the system cut cloud expenses by over 25% while improving response times and maintaining high SLA compliance.

Personal portfolio website

25 Mar, 2025 - 03 Jul, 2025

Key Skills: ReactJS CSS GSAP ThreeJS Responsive Web Design

Project Link: <https://github.com/yashavanthap55/PORTFOLIO>

I built a modern personal portfolio website to showcase my technical projects, practical skills, and software development experience. Designed with a strong focus on clean UI and smooth interaction, the platform uses React and Vite to ensure fast loading times and modular component architecture. I used Tailwind CSS to craft a clean, fully responsive design that scales seamlessly across desktop and mobile screens, while leveraging GSAP to introduce rich animations, fluid scrolling, and subtle visual feedback that elevate the user experience. Beyond frontend development, I also configured the custom domain routing, DNS settings, and automated deployment pipelines to maintain a reliable, production-ready web application.

Hospital Appointment booking system

Key Skills:

React Three.js / WebGL Tailwind CSS JavaScript (ES6+) REST APIs UI/UX Design Frontend Development
backend development

Project Link: https://github.com/yashavanthap55/Hospital_Appointment_system

I developed a modern hospital appointment booking platform designed to streamline how patients connect with and schedule visits with doctors. The application features a sleek, intuitive user interface enhanced with interactive 3D elements that elevate the overall user experience without compromising speed. Built with React and Tailwind CSS, the platform allows users to seamlessly browse available medical professionals, check real-time availability, and book appointments in just a few clicks. I focused heavily on smooth navigation, responsive design, and clean component architecture to keep the scheduling workflow fast, clear, and user-friendly across all devices.

Brain tumor detection(ML)

Team Size: 3

Key Skills: Machine Learning CNN Python

Project Link: https://github.com/yashavanthap55/brain_tumor_detection

Developed a high-precision deep learning model using Python and Convolutional Neural Networks (CNN) to automate the detection and classification of brain tumors from medical images. Built and optimized the entire machine learning pipeline, focusing heavily on data preprocessing, image normalization, and hyperparameter tuning to ensure robust feature extraction. By refining the network architecture, the model successfully achieved a 92% classification accuracy rate, showcasing a strong potential to assist radiologists by streamlining early-stage diagnostic workflows and reducing clinical error.

AI Livestock Recognition System

Team Size: 1

Key Skills: python Machine Learning CNN ReactJS REST responsive design

Project Link: <https://github.com/yashavanthap55/cattle-differentiation-AI-system>

Developed an automated livestock classification system using Python and deep learning to identify cattle breeds from uploaded images. Engineered the backend machine learning pipeline to handle image ingestion, data preprocessing, and feature extraction, ensuring the model can accurately analyze diverse visual traits such as coat patterns, body structure, and facial features. By leveraging computer vision and optimization techniques, the core model delivers instant and precise breed identification. This automated solution streamlines inventory management and tracking for farmers, livestock managers, and agricultural researchers, effectively reducing manual identification errors in the field.

Web vulnerability scanner

Mentor: Evlin Vidyut Latha | Team Size: 2

Key Skills: ReactJS Flask AWS S3 SQL UI/UX

Project Link: <https://github.com/yashavanthap55/Web-vulnerability-scanner>

Developed a full-stack web application using React and Flask to automate security auditing for target URLs. The scanner analyzes web applications for common security risks—including OWASP top vulnerabilities like SQL Injection and Reflected XSS—while detecting

missing HTTP security headers and sensitive directory exposures (/./git, /./env).

ASSESSMENTS / CERTIFICATIONS

programming in Modern C++

Provider: National Programme on Technology Enhanced Learning (NPTEL)

Key Skills: C++

Design and Implementation of Human-Computer interfaces

Provider: National Programme on Technology Enhanced Learning (NPTEL)

Key Skills: UI/UX

Affective computing

Provider: National Programme on Technology Enhanced Learning (NPTEL)

Key Skills: Psychology Design

EXTRA CURRICULAR ACTIVITIES

- Outside of my technical work, I express my creativity by sketching art and playing the guitar. These artistic hobbies help me unwind, maintain a balanced mindset, and bring fresh, innovative perspective to my web design and development projects.

PERSONAL INTERESTS / HOBBIES

- sketch art ,playing guitar
