Summary

Final-year B.Tech CSE (Cloud Computing) student at RV University with three internships spanning full-stack web development and applied machine learning, plus AWS cloud projects. Built an AWS auto-scaling system that cut cloud costs by 25%+ in testing. Seeking Software Developer roles.

Technical Skills

Languages: Python, Java, C/C++, JavaScript, SQL
Core CS: Data Structures & Algorithms, Operating Systems, Computer Networks, REST APIs, Git/GitHub, Agile/Scrum
Web & Backend: React, HTML/CSS, Tailwind CSS, Node.js, Express.js, GSAP, Three.js, Vite
Cloud, DevOps & Databases: AWS, Docker, Terraform, Kubernetes, CI/CD, MySQL, MongoDB
Machine Learning: CNNs, Symbolic Regression (PySR)

Experience

Aerial Adventures Pvt Ltd (FlyCamp) Dec 2025 – Present
Full-Stack Engineer Intern
- Built interactive React interfaces and front-end logic for FlyCamp's gamified drone system, turning design concepts into production UI.
- Integrated front-end flows with back-end systems to ensure seamless data flow across the application.
- Tested and debugged modules and user flows to keep performance stable; took ownership of full-stack feature delivery.

Zodopt Technology Solutions Pvt. Ltd. Jun 2025 – Jul 2025
Frontend Developer Intern
- Developed responsive React interfaces styled with Tailwind CSS across screen sizes as part of the front-end team.
- Translated visual requirements into functional web pages and optimized front-end performance.

RV University Jun 2024
AI for Healthcare Intern
- Developed a CNN-based machine learning model that recognizes human emotions (sadness, anger, calm, etc.) from audio, reaching 80% classification accuracy.
- Built the audio processing pipeline to extract acoustic features (pitch, tone, frequency variations) from raw voice recordings; trained and tuned the model on diverse vocal datasets in Google Colab.

Projects

Smart Auto-Scaling System | *AWS Lambda, CloudWatch, EC2, Auto Scaling, Python, PySR, MySQL* Jan 2026 – May 2026
- Trained symbolic regression (PySR) on 1M+ historical metrics to generate lightweight, explainable scaling formulas, replacing reactive threshold rules (team of 3).
- Deployed the formulas in AWS Lambda to monitor live CloudWatch telemetry, predict demand minutes ahead, and adjust EC2 capacity via Auto Scaling Groups; added moving averages and cooldowns to prevent thrashing.
- Cut cloud costs by 25%+ in testing while improving response times and maintaining high SLA compliance.

Cloud Database Migration | *MySQL, Amazon RDS, AWS*
- Live migrated an application's MySQL database to Amazon RDS (AWS), moving it onto a managed cloud database.

Brain Tumor Detection | *Python, CNN, Machine Learning* Team of 3
- Built a CNN-based deep learning model to detect and classify brain tumors from medical images, reaching 92% classification accuracy.
- Owned data preprocessing, image normalization, and hyperparameter tuning to improve feature extraction.

AI Livestock Recognition System | *Python, CNN, React, REST APIs* Solo project
- Built a deep learning (CNN) system in Python that identifies cattle breeds from uploaded images, with a React front end and REST API integration.
- Engineered the ML pipeline for image ingestion, preprocessing, and feature extraction, analyzing visual traits such as coat patterns, body structure, and facial features.

Education

RV University Expected 2027
B.Tech in Computer Science & Engineering (Cloud Computing), CGPA: 7.96/10 *Bengaluru, India*

Adichunchanagiri PU College 2023
Pre-University (12th), PUE Karnataka: 92.33% *Bhadravati, India*

Swamy Vivekananda English High School 2021
SSLC (10th), KSEEB: 89.92% *Bhadravati, India*

Certifications

NPTEL: Distributed Systems; Affective Computing; Design & Implementation of Human-Computer Interfaces; Programming in Modern C++
